

Excel Data Analyst Project Documentation

E-Commerce Sales Insights and Analysis

1. Project Overview

This project analyzes 2,000 e-commerce transactions using Microsoft Excel. Data cleaning, formulas, pivot tables, charts, KPI cards, slicers, and dashboards were used to transform raw data into meaningful business insights.

2. Business Problem

Management aims to identify top-performing products, categories, regions, customer segments, and sales trends to improve decision-making.

3. Dataset Information

Dataset contains Sales ID, Order Date, Product, Category, Store Type, Region, State, City, Gender, Age, Loyalty Level, Payment Type, Quantity, and Total Amount.

4. Data Cleaning Process

Removed duplicates, handled missing values, standardized formats, converted dates, and created age groups (20–40, 41–60, Above 60).

5. Excel Functions Used

SUM, AVERAGE, IF, COUNTIF, SUMIF, YEAR, MONTH, IFERROR, LEFT, RIGHT, and TEXT functions.

6. Pivot Table Analysis

Female customers generated ■1.23M revenue, Sports category generated ■542K, and Platinum members generated ■673K revenue.

7. Dashboard Components

KPI Cards, Category Analysis, Gender Analysis, Top Cities, Store Type Analysis, Loyalty Analysis, Region Analysis, Quarterly Trend, Top Stores, and Age Analysis.

8. Key Business Insights

Sports is the top category. Portable Power Bank is the top product. North region leads sales. Female customers contribute the highest revenue.

9. Recommendations

Increase inventory for Sports products, strengthen loyalty programs, maintain stock for top products, and improve promotions in low-performing regions.

10. Skills Demonstrated

Data Cleaning, Data Validation, Excel Functions, Pivot Tables, Pivot Charts, KPI Reporting, and Dashboard Design.

11. Conclusion

The project demonstrates how Excel can be used for business intelligence and data-driven decision-making.

KPI Summary

KPI	Value
Total Revenue	■2.17M
Total Orders	2000
Average Sale	■1087
Top Category	Sports
Top Loyalty	Platinum
Top Region	North
